

How to run Windows Update on Windows 10

Burner EOAS - 2017-12-08 - Comments (0) - Windows

To run windows update on Windows 10

1. Select the Windows icon on the bottom left of your desktop on the toolbar (Windows Start button).
2. Go to Settings > Update & security > Windows Update
3. Click **Check for updates**.

If Windows Update says your device is up to date, you have all the updates that are currently available, otherwise click the **Install** button to download and install the available updates.

If any updates are applied, it is strongly recommended you restart your computer.
