How to determine if your Mac OSX computer's hard drive is encrypted

Tom Yerex - 2016-10-05 - 0 Comments - in Mac OSX

Click on the "Apple" in the upper-left corner and go down to "System Preferences"

Click on "Security & Privacy"

Click on "FileVault" - Your hard drive is encrypted if you see the following text: "FileVault is turned on for the disk ""Macintosh HD""." (*PLEASE NOTE: The name of your hard drive may vary from the "Macintosh HD" example.)
